## **IN THE CLAIMS**:

Please amend claims 1, 12 and 16 as follows.

1. (Currently Amended) A method of trace activation in a mobile communications system, wherein a mobile station is in communication with a mobile communications network, the method comprising the steps of:

## defining a predefined trace activation number;

directing a communication from the mobile station to a <u>said</u> predefined trace activation number of a tracing facility for activating tracing of <u>for</u> the mobile station;

activating tracing at the tracing facility for the mobile station from which the communication originates; and

tracing mobile communications system activities relating to the mobile station from which the communication originates; and

generating a trace report for the mobile station.

2. (Previously Presented) The method according to claim 1, wherein the directed communication is a call from the mobile station and tracing is activated for the calling mobile station, and the method further comprises the step of:

deactivating tracing when the call is ended.

3. (Previously Presented) The method according to claim 1, wherein the directed communication is a message from the mobile station.

4. (Previously Presented) The method according to claim 3, wherein the method further comprises a step of:

deactivating tracing when a preset time period is elapsed.

5. (Previously Presented) The method according to claim 3, wherein the method further comprises a step of:

deactivating tracing when a second message from the mobile station is directed to the predefined trace activation number.

6. (Previously Presented) The method according to claim 1, wherein the method further comprises a step of:

defining at least one said trace activation number.

- 7. (Previously Presented) The method according to claim 1, wherein the communication is directed to the predefined trace activation number directly from the mobile station.
- 8. (Previously Presented) The method according to claim 1, wherein the communication is forwarded to the predefined trace activation number.

- 9. (Previously Presented) The method according to claim 1, wherein tracing is activated and deactivated automatically at the switching center.
- 10. (Previously Presented) The method according to claim 1, wherein subscriber tracing is activated for the mobile station.
- 11. (Previously Presented) The method according to claim 1, wherein equipment tracing is activated for the mobile station.
  - 12. (Currently Amended) A mobile communication system comprising: at least one mobile station:
- a communications network with which said at least one mobile station is arranged to communicate; and

a tracing facility for tracing <u>mobile communications system activities relating to</u> at least one of said mobile stations, wherein the tracing facility has a predefined trace activation number for activating tracing of <u>mobile communications system activities</u> relating to said at least one mobile station in response to a communication from said at least one mobile station to the <u>predefined</u> trace activation number.

13. (Previously Presented) The mobile communications system according to claim 12, wherein the tracing facility comprises:

means for receiving said communication; and means for activating said tracing in response to said communication.

- 14. (Previously Presented) The method according to claim 1, further comprising: recording all information available to a network concerning a call path, including internal messages of the network.
- 15. (Previously Presented) The mobile communications system according to claim 12, further comprising:

recording mechanism for recording all information available to a network concerning a call path, including internal messages of the network.

16. (Currently Amended) A system for trace activation, wherein a mobile station is in communication with a mobile communications network, the system comprising:

a tracing facility having a predefined trace activation number and configured to trace mobile communications network activities relating to a mobile station;

directing means for directing a communication from a mobile station to a the predefined trace activation number of a the tracing facility for activating tracing of mobile communications network activities relating to the mobile station;

activating means for activating tracing at the tracing facility for the mobile station from which the communication originates; and

generating means for generating a trace report for the mobile station.
